

P: Do we have something like ng-true-value/ng-false-value for reactive checkboxes? I only seem to get true/false out of them, regardless of value-attribute

S: hm, don't think so but you can easily solve this in your component

P: true, but it would be nice to be able to use the values directly (it's a form-array of checkboxes)

Desired feature: something like ng-true-value/ng-false-value for reactive checkboxes

F: Is there a way to tell the angular cli to put all my services into a services folder?

H: the cli is expecting you to do it from root everytime

H: ng generate c s services/servicename is what you have to do

H: But this is sort of fixable by aliases in your terminal

F: Yeah that's too much work for aliases. spelling out the directory works fine I suppose. thanks!

F: I feel like it would be a useful cli feature to just specify that I want all services in a services folder

Desired feature: the angular cli can put all my services into a services folder
